

VASUDEV DARSE SHIKARI

Hyderabad, India | +91 8328203617 | vasudevds1729@gmail.com | GitHub: dsvasudev19 | www.dsvasudev.in

PROFESSIONAL SUMMARY

Software Engineer with 3+ years building scalable, distributed services and RESTful APIs in Java, Spring Boot, and Node.js across FinTech and SaaS. Skilled in content-oriented systems — workflows, metadata, notifications, versioning, and real-time delivery — backed by event-driven architecture (Kafka, Apache Pulsar), caching (Redis), and SQL/NoSQL databases (PostgreSQL, MySQL, MongoDB). Experienced designing headless, API-first services on Docker and Kubernetes for high availability and fault tolerance, with CI/CD (GitHub Actions), Git, and Agile/TDD practices. Leverages AI coding assistants and agentic workflows — GitHub Copilot, LangChain, LangGraph, MCP — to boost engineering productivity and code quality.

TECHNICAL SKILLS

Languages & Backend : Java, Spring Boot, Spring MVC, Spring Data, Node.js, Python, JavaScript, TypeScript, REST APIs, Microservices
Data & Messaging : PostgreSQL, MySQL, MongoDB, Kafka, Apache Pulsar, Redis — event-driven architecture.
Content & Platform : Content modeling, workflows, metadata, notifications, versioning, headless/API-first design
Cloud, DevOps & AI : AWS, Docker, Kubernetes, GitHub Actions, CI/CD, Maven, Git, GitHub Copilot, MCP, LangChain, LangGraph, RAG
Frontend & Practices : Angular, React.js, Next.js, HTML5, CSS3, Tailwind CSS, Agile/TDD.

PROFESSIONAL EXPERIENCE

Kupa Inc — Full Stack Engineer

Dec 2025 – Present

- Independently architected and built the Unlok Arena app end-to-end, applying OOP principles and established design patterns to deliver a gamified, scalable trading-education platform with daily active engagement.
- Own full technical lifecycle — design, development, debugging, test automation, deployment, and production support — for Android delivery of the Arena app.
- Architected the Unlok Prediction Markets app single-handedly, integrating Webull's live market data API, designing all backend prediction-market logic, and implementing the complete UI.
- Built a centralized, event-driven notification service using Apache Pulsar, designed for high availability and fault tolerance, unifying in-app, email, and mobile push notifications across the entire product ecosystem.
- Architected a Co-Investing platform using Node.js and TypeScript with REST APIs, enabling real-time portfolio tracking across multiple asset classes for high-net-worth investors.
- Designed and delivered scalable RESTful APIs managing secure financial data flows and investment transactions, applying performance optimization and strict data-integrity practices.
- Automated CI/CD pipelines (GitHub Actions) for mobile release to Google Play and the Apple App Store, reducing manual deployment effort by 80% and standardizing release cycles.
- Containerized backend services with Docker to standardize environment parity across development, staging, and production, maintaining 99.9% production uptime.
- Collaborated cross-functionally with product, design, and compliance to integrate third-party financial services, ensuring regulatory-compliant data handling and timely delivery.

UST — Software Developer

Sep 2024 – Dec 2025

- Engineered a low-code enterprise application framework using Java, Spring Boot (Spring MVC, Spring Data, dependency injection), and JSON-based content/configuration models, applying OOP and design-pattern best practices to reduce development time by 25% and eliminate boilerplate across enterprise projects.
- Built and deployed MCP servers integrated with GitHub Copilot, enabling AI-assisted, agentic development workflows that reduced coding errors by 15% and accelerated feature delivery.
- Developed RESTful APIs and Spring Boot microservices handling 1,000+ daily requests, performing debugging, performance tuning, and schema/query optimization to ensure 100% data integrity at scale.
- Engineered reactive Angular UI components with advanced state management for enterprise authoring and admin interfaces, improving user engagement metrics by 20% across the product suite.
- Worked within Agile sprints using Git/GitHub, Maven, and JIRA, taking end-to-end ownership of features from design and code review through testing and production release, while responding promptly to defects and customer-reported issues.

Spack Solutions Pvt Ltd — Full Stack Developer

Jan 2024 – Sep 2024

- Led end-to-end development of an EV charge-station management system (Node.js, React) enabling real-time monitoring, session tracking, and transaction management across 50+ stations.
- Built a secure MERN-stack web application with multi-layered JWT authentication and RBAC, protecting sensitive data for 500+ users.

- Delivered customizable CMS solutions with modular component architecture, improving internal content-publishing speed by 40%.
- Implemented atomic database transactions across MongoDB and MySQL, applying distributed-systems and concurrency-control principles to eliminate race conditions under concurrent load.

SELECTED PROJECTS

CORE Platform — Enterprise Startup Management System — *Java · Spring Boot · Python · React · Node.js · Kafka · Redis · Kubernetes · MCP · LangChain · LangGraph · WebSocket · Docker*

- Architected a full-scale enterprise platform using Microservices and Domain-Driven Design (DDD), applying OOP and design-pattern principles to manage every facet of startup operations — employees, projects, Kanban boards, communications, client management, and billing — from a single unified interface.
- Built a Python-based intelligence service handling all AI functionality, implementing LangChain and LangGraph agent workflows and Retrieval-Augmented Generation (RAG) pipelines for natural-language querying and automated task assistance.
- Implemented Model Context Protocol (MCP) servers bridging AI agents with platform APIs, enabling natural-language task delegation and automated sprint planning, and reducing administrative overhead by 40%.
- Built an asynchronous, event-driven notification service using Kafka for reliable message delivery across microservices, with Redis-backed caching to reduce read latency on high-traffic endpoints — applying distributed-systems and multithreading concepts.
- Deployed and orchestrated services on Kubernetes, standardizing scaling, high availability, and environment parity across the platform's microservices.
- Engineered a real-time WebSocket messaging service using Node.js and Socket.IO, supporting persistent chat, live notifications, and cross-team collaboration with sub-100ms latency.
- Designed a stakeholder-facing Client Portal with real-time project dashboards, bug tracking, and milestone visibility, eliminating manual status reporting and improving client transparency.
- Implemented granular RBAC across employee, project, and billing modules, enforcing role-based access control for admins, managers, and clients.

DigiSchool — Multi-Tenant SaaS Educational Management System — *Java · Spring Boot 3.x · React 19 · MySQL*

- Built a cloud-native, multi-tenant SaaS platform handling school operations — attendance, grades, library, and notifications — serving multiple institutions from a single scalable deployment.
- Implemented JWT-based stateless authentication with MFA and granular RBAC across 6+ user roles, and engineered automated attendance/grade reporting with analytics dashboards through debugging and performance-focused query design, cutting manual admin workload by 60%.
- Built a Library Management Service and Notification Service supporting resource metadata and cataloging, automated email alerts, reservation workflows, and real-time checkout tracking across all tenant institutions.
- Implemented a parent-facing app for real-time tracking of student attendance, grades, and progress, along with an AI-powered doubt-solver feature giving students instant clarification on academic questions.

Portfolio MCP Connector & GitHub-Integrated PM Platform — *MCP · Node.js · TypeScript · Express.js · GitHub REST API · Google Calendar API*

- Built and deployed a live MCP server (vasudev-claude.vercel.app) exposing structured tools for profile, project deep-dives, and Google Calendar-integrated appointment scheduling for AI agents.
- Automated repository creation, issue tracking, and status webhooks via GitHub REST APIs, plus a JWT-based multi-role authentication system with token refresh, cutting project initialization time from 15 minutes to under 2.
- Structured the connector around granular, discoverable MCP tool definitions (profile, project deep-dives, skills, scheduling), allowing any MCP-compatible AI client to invoke capabilities without custom API integration.

EDUCATION

Malla Reddy Engineering College, Hyderabad Bachelor of Technology — Computer Science and Engineering CGPA: 8.91	2020 – 2024
Narayana Junior College, Hyderabad Intermediate (MPC) Score: 982/1000	2018 – 2020

CERTIFICATIONS

- Microsoft Azure Fundamentals (AZ-900) — Microsoft Technology Associate
- Full Stack Developer Certification — Udemy
